ELECTRONIC PAYMENT OPTIONS

Playsafe has developed and continues to evolve a range of electronic payment options for use in its core amusement, gaming, vending, ticketing & transport sectors.

- Card payment systems are available as kits to retrofit existing pay-to-use machines to be used alongside or instead of cash
- Card readers can be supplied to OEM fit on new equipment
- Card payment can be added to the whole Thomas range of coin, change, ticketing and prepayment machines – both analogue and digital series.

In all cases, Playsafe management systems can be updated to report cashless income and transactions alongside cash movements to provide comprehensive income reporting – often directly integrating with 3rd party data sources.

1. Contactless payments

Playsafe supplies and integrates the Payter range of contactless hardware and card processing (www.payter.com) [We will offer P66 kit as follows:

P66.5.20 P66 The Plane Black - AC.26 3G modem A66.01 P66 Eva Front Mounting Set (Incl. 4 screws) AC.50 EMS SAM AC.01 MDB Cable

Payter_Cashless_Solutions (3).pdf

Payter can be connected using pulse or MBD interface to a wide variety of machines and Playsafe's dedicated interface board allows full cc talk integration.

Payter offers secure contactless payments with full support:

- Curo remote Management app
- Fixed monthly fees
- First-line 7-day support by Playsafe
- Daily payments
- 1.5% merchant fees (min fee 2.5p)

Thomas machines with Payter contactless payment

These machines configured to dispense coins, tickets, cards or tokens in return for contactless card payment

2. Chip & Pin full card payment systems from Playsafe

Designed for ticketing, vending, amusement & gaming, Playsafe fits the Ingenico range of approved chip & pin hardware with full security and compliance systems via Payment Service Provider NMI

The iUP250 card reader & pin pad combine with the iUC150b contactless card reader to give full credit, debit, chip & pin and contactless card payment options.

Playsafe connects to a wide range of merchant systems globally via the NMI payment gateway

3. AGC debit card payment solutions

The Thomas 8000 Paystation series is available now with the Oti Global Uno 6 reader allowing secure debit card payments to be processed at the Thomas Paystation to sell a TITO gaming ticket.

[Hardware: https://www.otiglobal.com/emv_cashless_readers/uno_6/]

PSP: CreditCall/NMI with merchant, Credorax

Payment is via contactless card and limited to contactless payment limits (currently £30)

Thomas interface makes easy selection of product and provides full Gamcare and social responsibility warnings:

Card usage is Operator-controlled using management fob – Know Your Customer protection

Transactions per card can be limited to a daily total and restricted with a minimum gap between usages – Responsibility & protection

Income is recorded directly into Paystation records and updated to Playsafe management systems

This product is approved for use in Code 7995 retail gaming environments. Should a customer have chosen to self-regulate their card usage, they will not be able to use this device with this setting in place.

Customer can purchase a TITO ticket and play into a machine directly, or exchange for cash at the Paysation and play a cash-op
