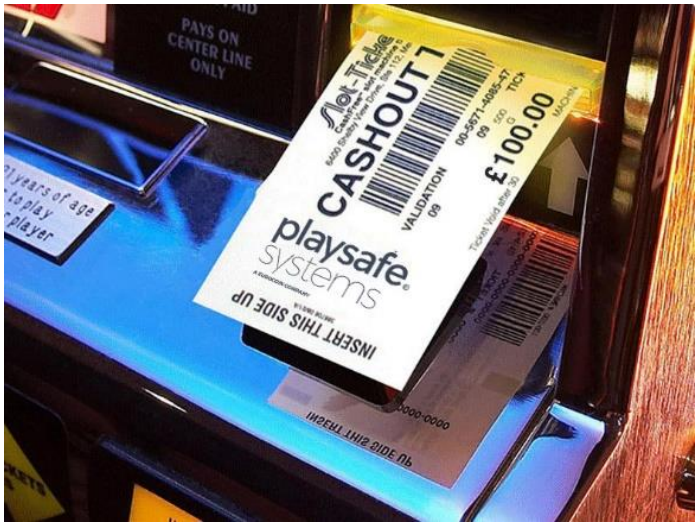
TITO

DATA SHEET

Provide your customers with a secure Cashless experience that helps drive efficiencies and profitability for your business.

What is TITO?

The TICKET IN, TICKET Out (TITO) system is used in gaming machines to print out a slip of paper with a barcode indicating the amount of money represented, rather than paying out coins, tokens or locking up the machine for an attendant to pay. These tickets can be redeemed for cash at an automated kiosk or replayed into other machines by the player.



What are the advantages?

- Removing the need for a cash float from machines, saving money
- Increased security – cash handling is reduced
- TITO tickets may be redeemed at automatic kiosks
- Players like TITO

Playsafe Systems is an Authorised Distributor for Ticket2Go, JCM's Global innovative ticketing solution developed for AWP/B3s using the BACTA approved 'GBG' (Gaming Business Group) protocol and SAS-based slot machine markets.
The Ticket2Go system is now installed in more than 250 UK gaming venues and on 3,000+ machines!

This TITO system is already integrated with the Thomas PayStation Kiosk with Ticket Redemption features, plus it is completely networked with our Playsafe Quantum machine management system to provide joined-up automatic data retrieval and analytics for site owners and management.

What are the benefits of TITO?

- **Increased game floor performance** – decreases the number of hand-pays resulting in longer periods of gaming machine operation
- **Increased customer service levels** – reduced time at cashier stations and easy player transition from one gaming machine to another, carrying credits on a ticket, not cash
- **Increased security** – eliminates coin clearances & refills from gaming machines. Coin floats are no longer required. All client pay-outs centralised and automated
- **Increased efficiency** – your Customer Service team can focus on players, not pay-outs. By adding a Paystation kiosk to automate all change & TITO ticket redemption functions, saving time & money on your Cash Desk operation

How TITO works?

The machines operate using a network interface to communicate with a secure central system that issues unique barcodes & tracks tickets as they are printed, replayed and/or redeemed.
Each machine utilizes a barcode scanner built into the bill acceptor to read the ticket, plus a thermal ticket printer in place of the coin hopper. The machines print a ticket when the player selects 'Cash Out' or where a hand-pay would normally be required.

TITO is proven across the gaming machine sector

Ticket2Go can be installed across multiple sites, enabling operators to replace coin pay outs with a simple barcoded ticket payout solution. Site owners can expect to immediately bank their entire current coin float – typically £1,000 to £1,500 per
machine – and enjoy the subsequent time & cost savings on coin-counting, bagging and banking.

TITO Systems including: Hardware (such as bar code readers and printers) – Paystation Kiosks – Consumables – Playsafe Quantum software (for machine data retrieval and reporting)

We've got the complete package for your operation!
