Thomas 8000 Series - Credit & Debit Card Payment Processing Overview

Introduction

When processing card payments in an unattended environment, a payment service provider (PSP) must be used. A PSP is effectively a bridge between the card payment hardware and an approved merchant bank.

The Thomas 8000 Series range uses the Ingenico iSelf series hardware, combined with NMI's award winning 'ChipDNA' payment gateway service, to offer an accredited Point To Point Encrypted (P2PE) solution. This considerably lowers the required PCI DSS scope (to SAQ-P2PE) for the operator.

We require you to already have, or be willing to setup, an approved merchant bank account (e.g. with Global Payments) and provide us with the Merchant account ID (MID), to which the funds from successful card payments will be deposited to. Other details, such as site address, terminal description (for auditing purposes etc.) will also be required.

Requirements

To enable your PayStation to accept card payments, the following is required:

- Internet connectivity to your Thomas PayStation provided via;
  - Ethernet (RJ45)
  - Wi-Fi
  - 3G / 4G
- A merchant bank account with an approved acquirer

Approved Acquirers

AIB – Contact
AMEX – Contact & Contactless
Barclaycard – Contact & Contactless
Elavon – Contact & Contactless
Global (HSBC) Payments – Contact & Contactless
Lloyds – Contact & Contactless
WorldPay – Contact & Contactless

YOU MUST NOTIFY YOUR MERCHANT BANK, THAT YOU REQUIRE YOUR MID SETUP, AS A DEPOSIT ACCOUNT, FOR UNATTENDED TRANSACTIONS, USING CREDITCALL AS THE PAYMENT SERVICE PROVIDER.

Payment Service Provider Processing Fee

There is a monthly fee, per terminal, to cover the payment gateway service, conduct any live maintenance and to administer refunds on your behalf. The monthly fee is currently £25 (GBP).
