

Quantum^{V6}

Machine Management System

The key to secure and accurate machine revenue management. Now with Quantum TITO inside.

What is Quantum^{V6}?

Playsafe Quantum is a proven, flexible solution that automates the monitoring and reporting of your gaming machine data. Fast, simple and cost-effective, Quantum helps you by converting your data into useful information allowing you to evaluate the profit contribution either at site level or down to the individual machines helping you maximise and secure your machine income.

NEW: Quantum^{V6} now includes TITO, meaning there is no requirement for a separate TITO system.

How does it work?

Whether you're a small to medium sized operator or large business owner, Quantum provides a versatile and scalable solution that automates the monitoring and reporting of your gaming machine data. This, in turn, allows you to analyse your revenue, providing accurate, real-time accounting information to business owners and operators.

From machine performance statistics (including TITO ticket data) to fraud detection and prevention, Quantum helps you maximise returns on every machine.

Highly configurable, Quantum provides a number of cost effective ways to collate your machine data, including;

Option 1: Quantum Handheld – Using the highly robust Android device, machine meters are collected manually and then sync'd to the Quantum PC via Wi-Fi

Option 2: Electronic Data Capture – Installing a Playsafe Systems EC4 EDC unit in each machine, data is continuously sent over Wi-Fi to the Quantum PC

Option 3: Any combination of the first two options.

Features

-  Track your financial performance by checking net take and operating percentages
-  Reconcile your counted cash with your metered cash
-  Prevent and detect fraud
-  Monitor your hoppers in real time, including maintaining hopper levels and reducing site floats
-  Respond to machine errors and events, thereby minimising down time
-  Track all cash handling by site staff including HandPays, Machine Refills and Player Claims
-  View and analyse both live and historical data across your whole site and estate
-  Inbuilt reports provide detailed performance data
-  RealTime machine reporting

New for 2020

-  Inbuilt GBG TITO server, allowing the connection of any GBG compliant TITO machine
-  Zonal Collections, allowing a single site to be split into separate machine area's

Benefits

- Secure your machine income
- Speed up machine collections, with automated machine meters
- Use collection data to drive better machine performance
- No requirement for separate TITO server
- Lowest cost of ownership
