

Cloud Hosting

Intergrated cloud solutions...

What is Cloud Hosting?

Instead of physical computers, cloud based solutions are virtual computers (hosted off-site) and often referred to as Cloud Servers. These solutions are provided by large computer specialist companies such as Microsoft and allow businesses to reduce the number of physical computers and storage devices in their business.

Computer programs such as Microsoft Office and Playsafe Quantum, can then be installed on these cloud systems and accessed remotely via the internet, the user will not notice their system is running via a cloud based server.

What are the benefits?

- A cloud server gives your business stability and security as the cloud servers are constantly updated on your behalf
- Cloud servers are stable, fast and secure
- No expensive capital costs for new or upgraded hardware. If you require more storage space or computing power, our cost effective monthly payment plans allow you to scale up or down as required
- All your data is permanently backed up and secure
- No need to worry about your old onsite PC/server breaking down and losing all your data.
- All Playsafe applications can be run from the cloud
- Trusted Microsoft Azure servers
